EDUCATION

•Jawaharlal Nehru University, New Delhi

2023-2027

B.Tech in Electronics and Communication Engineering

•D.A.V Public School, Saharanpur

2022

Central Board of Secondary Education

CGPA/Percentage: 84

•D.A.V Public School, Saharanpur

2020

Central Board of Secondary Education

CGPA/Percentage: 88

EXPERIENCE

- Developed responsive and user-friendly web interfaces using HTML, CSS, JavaScript, and React.js
- Built reusable frontend components and implemented clean UI layouts using modern web development practices
- Integrated frontend pages with backend APIs using Axios for data fetching and user authentication
- Used Git and GitHub for version control, project management, and open-source collaboration
- Debugged frontend issues and improved responsiveness across different screen sizes

PERSONAL AND GROUP PROJECTS

• Virtual-Trading-App

GitHub

Developed a web-based virtual trading platform that allows users to practice stock trading in a simulated environment.

- Tools: React.js, JavaScript, HTML, CSS, Axios, Node.js, Express.js, MongoDB
- Implemented user authentication pages including login, signup, and forgot password flow
- Integrated frontend with backend APIs using Axios for secure client-server communication
- Used React Router for navigation between authentication and application pages
- Added toast notifications for success and error messages using React Hot Toast
- Designed responsive UI components for smooth usage across desktop and mobile devices

• AttendX: Biometric Attendance & Verification System

Group Project

Developed a secure full-stack attendance platform that combines facial recognition, anti-spoofing, geofencing, and multi-factor verification to prevent proxy attendance.

- Tools: Python, Flask, SQL, HTML, CSS, JavaScript, InsightFace, SilentFace, JWT, WebSockets
- Implemented facial recognition using InsightFace with 512-dimensional face embeddings for accurate identity verification
- Integrated SilentFace anti-spoofing technology to detect and prevent photo, video, and replay-based attendance fraud
- Developed real-time QR code and TOTP-based multi-factor authentication for secure attendance marking
- Implemented GPS-based classroom geofencing and IP/GPS validation to ensure attendance can only be marked from authorized locations
- Designed device fingerprint locking to prevent account sharing and unauthorized device access
- Built a multi-role architecture supporting Admin, Faculty, and Student workflows with Role-Based Access Control (RBAC)
- Developed faculty audit and review workflows for attendance verification, approval, and anomaly detection

- Integrated WebSocket-based live attendance tracking for real-time monitoring and instant attendance updates
- Implemented self-improving face embedding history to enhance recognition accuracy over repeated attendance sessions
- **Portfolio Website**
Built a personal portfolio website to showcase skills, projects, and contact information.
 - Tools: HTML, CSS, JavaScript
 - Designed a responsive frontend layout for desktop and mobile screens
 - Implemented clean sections for about, skills, projects, and contact details
- **Open Source Contributions** GitHub Profile
Actively contributed to open-source repositories through GitHub, with contributions reviewed and merged by project maintainers.
 - Contributed to open-source projects by fixing issues, improving code quality, and submitting pull requests
 - Worked with repositories related to Julia, GNU Octave, ROS, and beginner-friendly open-source contribution projects
 - Created and managed pull requests that were reviewed and merged by maintainers
 - Practiced professional Git workflows including forking, cloning, branching, committing, resolving conflicts, and submitting pull requests
 - Gained experience in reading large codebases, understanding project structure, and collaborating with open-source communities

TECHNICAL SKILLS AND INTERESTS

Languages: C++, Python, JavaScript, HTML, CSS

Frontend: React.js, Responsive Web Design

Backend: Node.js, Express.js, Flask

Cloud/Databases: MongoDB, SQL, Basic MySQL

Developer Tools: Git, GitHub, VS Code, Chrome DevTools

Libraries/Tools: Axios, React Router, React Hot Toast, OpenCV, DeepFace, JWT

Open Source: Git, GitHub, Forking, Pull Requests, Code Contributions

Soft Skills: Problem Solving, Communication, Teamwork

Coursework: Data Structures, DBMS, OOPs

Areas of Interest: Web Development, Full Stack Development, Open Source, AI/ML

POSITIONS OF RESPONSIBILITY

• **Position,** Secretary, Blackout Weightlifting Club, JNU

2025-2026

ACHIEVEMENTS

- Built multiple web development projects using React.js, JavaScript, HTML, and CSS
- Developed a virtual trading application with authentication and API integration
- Built a biometric attendance verification system using Flask, SQL, facial recognition, and geolocation tagging
- Made open-source contributions through GitHub with pull requests reviewed and merged by maintainers
- Earned GitHub Pull Shark achievement for pull request activity
